# INTRODUCTION

The introduction of Bitcoin was in 2009 started the cryptocurrency revolution. This cryptocurrency is not controlled by any government or central agency and allows users to trade anonymously and safely. It didn't take long for other cryptocurrencies to emerge, which necessitated the need for decentralized exchanges.

Decentralized Exchange (DEX) is a peer-to-peer (P2P) marketplace that connects buyers and sellers of cryptocurrencies.

Unlike Centralized Exchange (CEX), decentralized platforms are not controlled by any central government or authority. This means that during transactions on the DEX platform, the user retains control of their private keys. In the absence of a central authority, DEXs use smart contracts that are executed under standard conditions and all transactions are recorded on a blockchain. These secure and trustless transactions represent a fast-paced segment of the digital asset market and are the pioneers of new financial products.

# BINANCE SMART CHAIN

Binance Smart Chain (BSC) can best be described as a blockchain that works in parallel with Binance Chain. Unlike Binance Chain, BSC has smart contract features and Ethereum Virtual Machine (EVM) support. The goal of the design here was to maintain the high performance of the Binance chain while introducing smart contracts into the ecosystem. Binance Smart Chain support BEP-20 tokens standard.

Since BSC is compatible with EVM, it was released with support for Ethereum's vast universe of tools and DApps. In theory, this makes it easier for developers to transfer their projects from Ethereum. For users, this means that applications such as MetaMask can be easily configured to work with BSC. Seriously, it's just a matter of tweaking a few settings.

yBearSwap is built on the Binance Smart Chain (BSC) to provide swift and cheap exchange transaction for users of the platform.

# BEP-20 TOKENS

BEP-20 tokens are native tokens that run on the Binance Smart Chain and are capable of smart contracts. The BEP-20 is a standard token on Binance smart chain. The BEP20 is similar to the ERC20 tokens that are issued and implemented on the Ethereum blockchain. Binance Smart Chain is a blockchain that is compatible with Ethereum's virtual machine and enables DeFi projects and other blockchains to participate in interoperability between chains.

The main purpose of this token is to serve as a model or framework used by other tokens and to determine how tokens can be issued, who will issue them, and other provisions about their usefulness. BEP-20 tokens are supported and powered by BNB. BEP-20 tokens can be exchanged for their BEP-20 counterparts.

# YBEARSWAP

yBEARSwap is a decentralized automated market marker exchange running on Binance Smart Chain and Pancakeswap exchange, with lots of other features that let you earn and win tokens.

sBEAR token is the native BEP-20 governance token of the platform. Users can earn sBEAR tokens by providing liquidity on yBEARSwap. sBEAR token allows a constant price pump with a sufficient burn mechanism. We are not trying to replace the swap and exchange but to add value into the system and create a suitable and sustainable environment for people to yield farm with high APR.

# YBEARSWAP

BY YIELD BEAR FINANCE

# WHY YBEARSWAP

yBearSwap takes advantage of the principal principles of the Binance Smart Chain and Pancakeswap to increase finance transparency and security, and support an economic system that is integrated and standardized. Here are some of the reasons why you should choose yBearSwap:

## **Fast transaction and low transaction costs**

yBearSwap is based on BSC, which takes very little time to complete transactions and also has very low transaction costs.

## **Security**

yBearSwap employs multiple layers of security that protect user resources and protect the platform from outside attacks. This not only promotes safety, but also increases transparency, which is crucial for the DeFi ecosystem.

## **Interoperability**

The yBearSwap provides multi-chain support for the BSC and Pancakeswap. This bridge allows users to participate and use our decentralized platform. Users can swap their BSC based sBEAR tokens in Pancakeswap.

# WHY YBEARSWAP

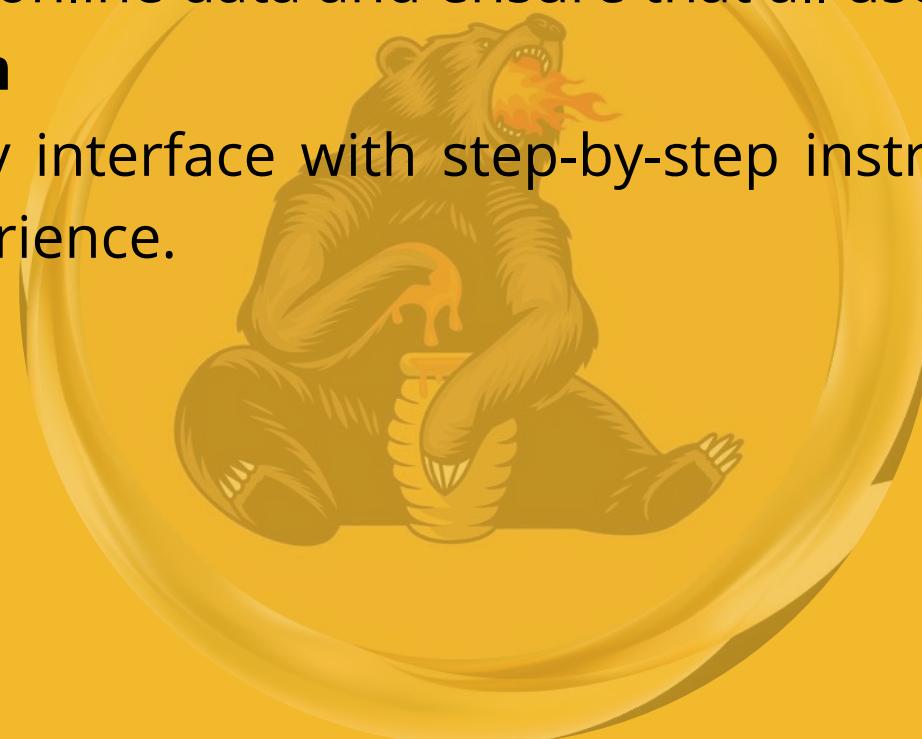

## Transparency

Every transaction is placed on yBearSwap's decentralized network, which means that all transactions are sent to other network users for verification. These transparency measures facilitate the analysis of online data and ensure that all users have access to online activities.

## Easy-to-use platform

We have a user-friendly interface with step-by-step instructions that provides an intuitive and engaging user experience.

# SERVICES

## TRADING

yBearSwap is an automated market maker (“AMM”) that allows two tokens to be exchanged on the Binance Smart Chain (BSC). It offers a simple one-click interface to trade two BSC assets in a liquidity pool.

Trading with yBearSwap is reliable and unauthorized with liquidity funds that allow anyone to create a market by providing corresponding values of the two BEP-20 tokens being paired. Liquidity providers receive a proportional share of the trading fee each time a trading pair is used.

## FARMING

Farming, which can also be called liquidity mining, is a method of generating rewards with cryptocurrency holdings. In simple terms, it means locking up cryptocurrencies and getting rewards.

We have many pools on which you can earn with high yield. To participate, you need to add liquidity and stake LP released by Pancake. The greatest return will be produced using tokens from the Yield Bear Finance ecosystem (yBEAR, yBHONEY, sBEAR) and tokens from future partners.

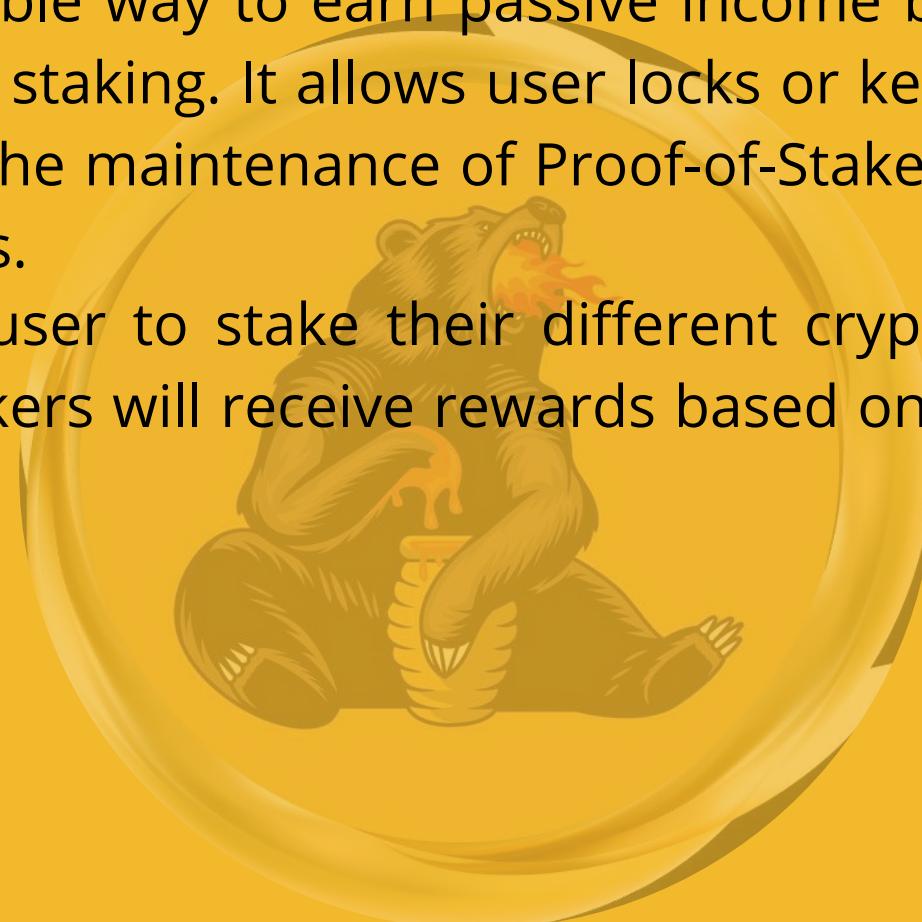

# SERVICES

## STAKING

Staking is a very profitable way to earn passive income by staking in a crypto wallet or an exchange that supports staking. It allows user locks or keeps their crypto assets in a crypto wallet to participate in the maintenance of Proof-of-Stake (PoS)-based blockchain system in order to receive rewards.

yBearSwap allows the user to stake their different cryptocurrencies in different pools to earn sBEAR tokens. Stakers will receive rewards based on the amount of crypto assets they stake.

# TOKENOMICS

The native token of yBearSwap is sBEAR

Initial Supply: 2,000,000

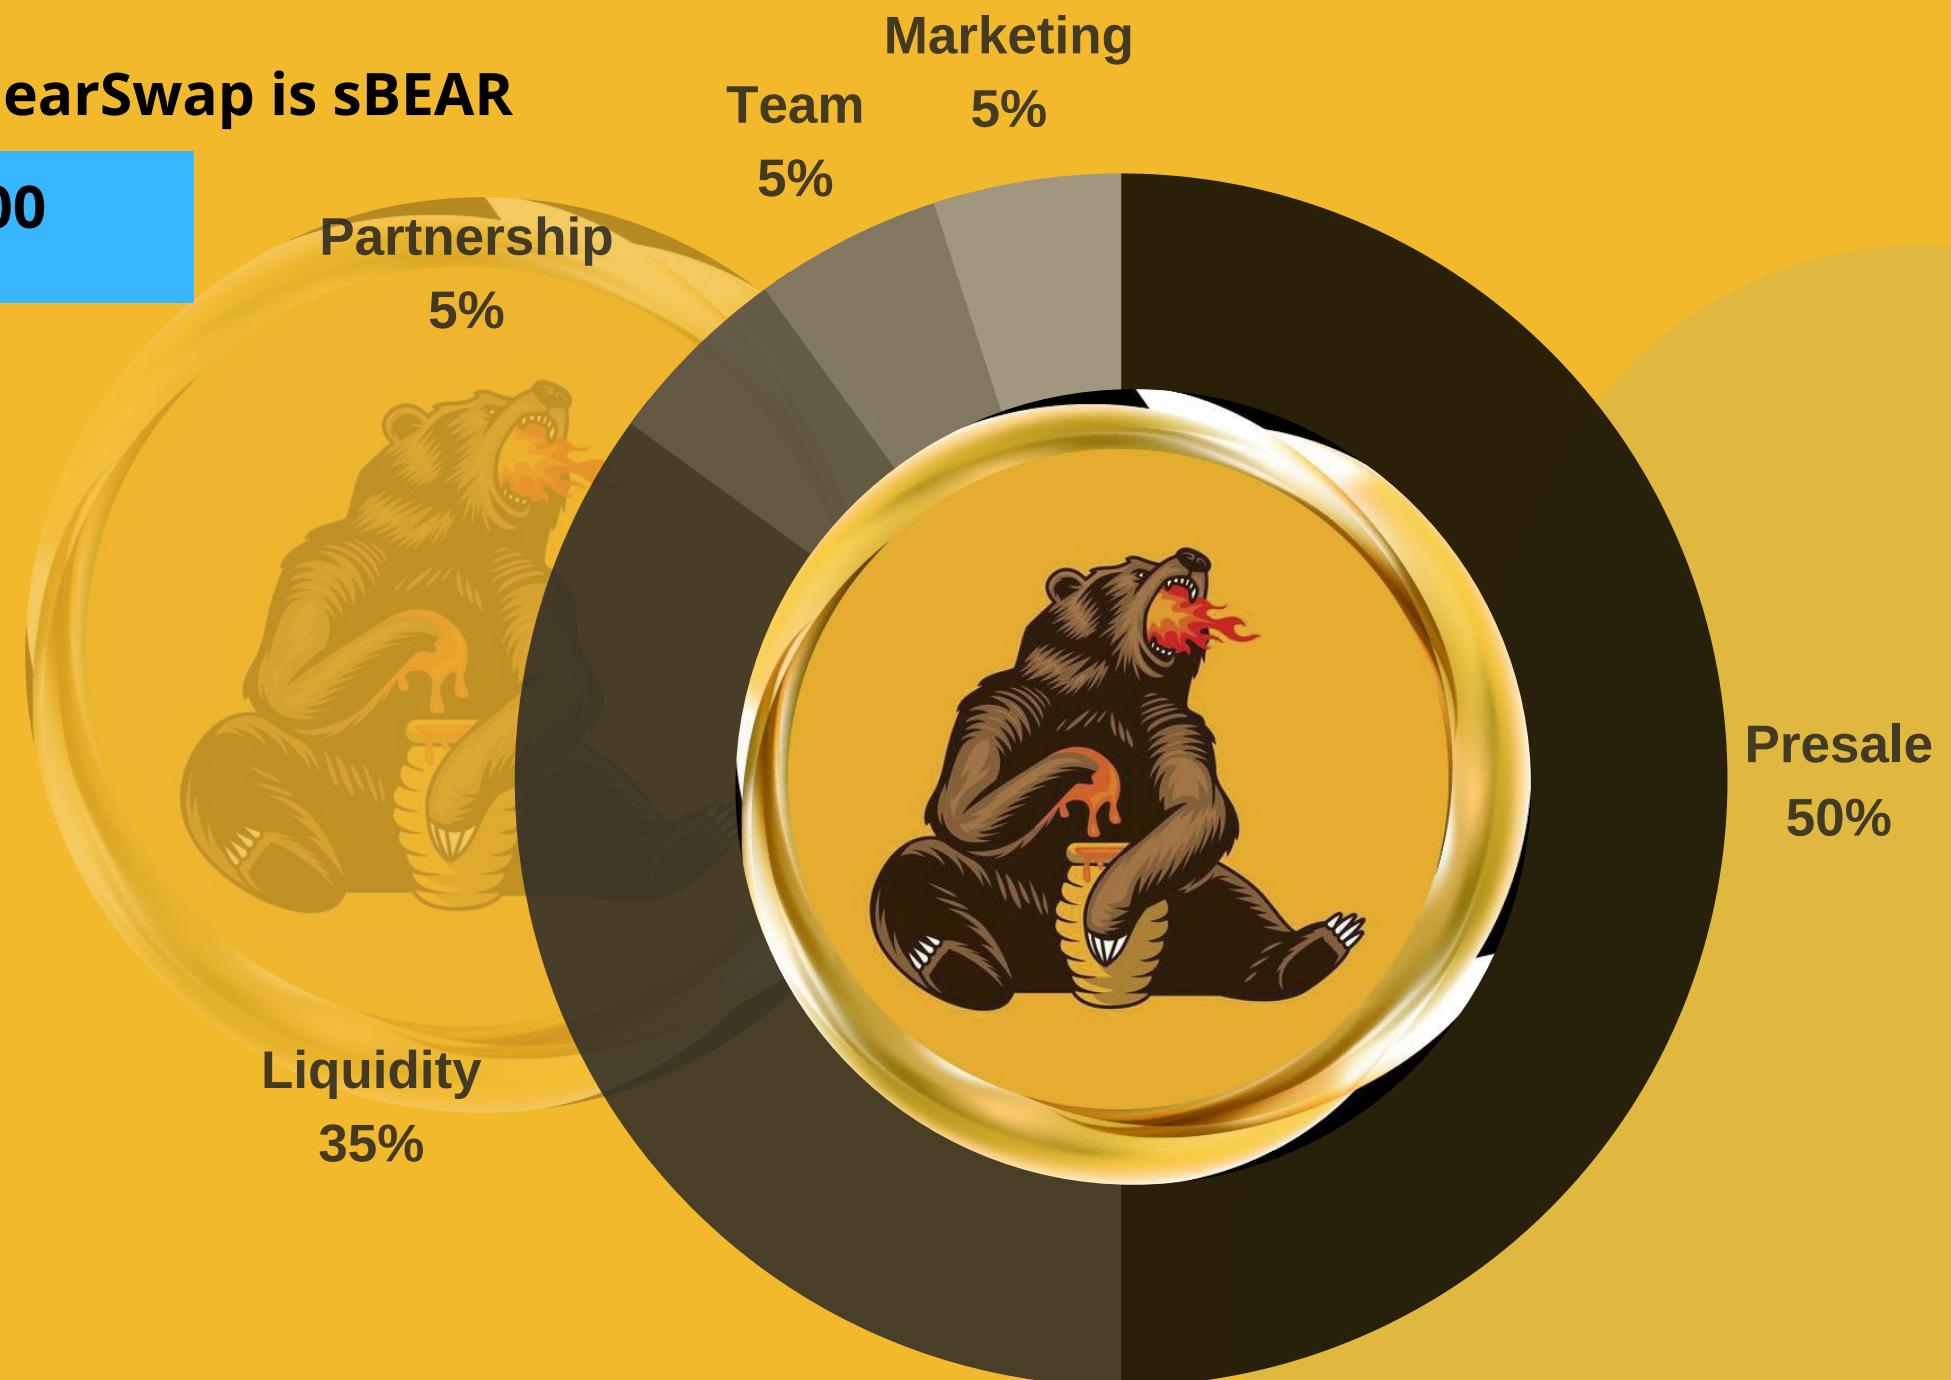

Presale: 1,000,000

Liquidity: 700,000

Partnership: 100,000

Marketing: 100,000

Team: 100,000
